Russian rocket engine successfully tested

NASA engineers successfully tested a Russian-built rocket engine Wednesday evening at Marshall. The test began with engine ignition at 5:47 p.m. and lasted 64 seconds, as planned. The tests are designed to measure the performance of the Atlas III propulsion system, which includes avionics and propellant tanks and lines, and how these components interact with the Russian-designed RD-180 engine.

**Annual Nut Sale,
8 a.m.-4 p.m.
Monday-Friday in
Bldg. 4752**
