Exclude NEMS transaction 74 from NEMS-HISTORY check	When performing a non-controlled add, the model number and serial number are checked against the NEMS-HISTORY file to see if there is a match. If a match is found the user has the opportunity to process as a controlled add. If a match is found for an item that was re-tagged (NEMS transaction 74) this item will pick up the wrong ECN.		Change processing to exclude the NEMS transaction 74 when looking for a match on the model number and serial number on the NEMS-HISTORY file.

Unique Job Names			Currently all overnight batch jobs have the same job name. It would make it easier to identify which job to look at if there is a problem, or to just check on the job.	Make overnight batch jobs have a unique name by placing the report/maintenance number in the job name of the JCL job card.

GSA Communications		The interface between NPDMS and GSA is only transferring information in one direction (NPDMS to GSA). Need to see what it would take to receive information back from GSA to update NPDMS information (Surplus Release Date, Other Federal Agency screening, Freeze, Unfreeze, added to sale, sold, etc).					Study what is needed to make the interface between NPDMS and GSA two-way communications.
